El pie equinovaro es una deformidad congénita del pie que requiere una evaluación integral antes, durante y después del tratamiento quirúrgico o conservador.

La evaluación de las necesidades permite planificar una atención adecuada y personalizada de cada niño.

EVALUACION CLINICA Valoración de la severidad de la deformidad (posición del pie, rigidez y movilidad)

Evaluación de ambos pies, ya que puede ser unilateral o bilateral

Revisión de desarrollo neuromuscular y descartar enfermedades asociadas.

Uso de escalas técnicas para medir el grado de afectación
